

Summary:

- 1) Control flow graphs have really improved my way of testing and deriving testcases.
- 2) Understood the use of Junit in unit testing.
- 3) Initially, corrections were difficult to point without these testing and with the help of edge coverage and Junit all the issues were identified.
- 4) Code coverage tool (JaCoCo) was very user friendly, and which made testing easy by providing missing edges coverage track as well, which motivated to create more testcases.
- 5) My understanding over important elements of unit testing become clearer through this project.
